

AXILEX – Real-Time Project (Week 3 Tasks)

Project: Electrician Contractor Management System

Objective

Develop core modules of the system including Jobs, Tasks, Electrician and Materials management.

Job Management Module

- Add new job
- Assign electrician
- Set location and deadline
- View all jobs

Electrician Management

- Add electrician
- View list
- Update details
- Delete electrician

Task Assignment Module

- Assign task to electrician
- Link task with job
- Set task status (Pending/In Progress/Completed)

Task Tracking

- View all tasks
- Filter by status
- Update task status

Materials Management

- Add materials
- Track quantity
- Update usage
- View material list

Module Integration

- Connect Job, Task, Electrician, Materials modules
- Ensure system flow is working

UI + Backend Sync

- All pages connected
- No static data
- Fully dynamic system

Submission Requirements

- GitHub repository
- Working modules
- Screenshots/demo
- Proper structure

Expected Outcome

- Students can build real modules
- Perform CRUD operations
- Integrate complete system
